## YR1 MULTIPLICATION AND DIVISION KNOWLEDGE ORGANISER

## Key Concepts

- Solve one-step problems involving multiplication and division, by calculating the answer using concrete objects, pictorial representations and arrays with support.

In Year 1 it is important for children to work practically to solve problems like this using concrete objects.

Children in Year 1 are not expected to recognise or use the symbols for multiplication or division.

## Key Vocabulary

- Equal groups
- Equal rows
- Grouping
- Sharing

- Doubles
- Halves
- Count in $(2 \mathrm{~s}, 5 \mathrm{~s}, 10 \mathrm{~s})$
- Lots of
- Groups of

Making Equal Groups
Before starting multiplication and division it is necessary to understand what it means to have equal groups.

For example: Each plate has 2 cakes. They are equal groups

## Adding Equal Groups

This idea can then be combined with knowledge of counting in $2 s, 5 s$ and 10 s .

3 groups of 2 is 6 .

Three twos equals six.

## Arrays

The ideas then develops into making equal rows to organise objects clearly:

5 cakes in 1 row 10 cakes in 2 rows

15 cakes in 3 rows

20 cakes in 4 rows

This group of rows is called an array.

As well as using real objects, arrays can be made using representations, like counters or drawings.

## 3 rows

3 fives $=15$

## YR1 MULTIPLICATION AND DIVISION KNOWLEDGE ORGANISER

## Double

An important part of multiplication in understanding that doubling a number makes 2 equal groups of that amount.

Double $7=14$

2 sevens

Half
The inverse of this is half. This can be worked out practically by sharing between 2 groups.

Half of 6 is 3

6 shared between 2 is 3 .

## Grouping Equally

When the total is known, finding the number of groups may be necessary. This is called division by grouping.

For example, if Alfie puts 2 cakes on each plate, how many plates are needed?

There are 2 cakes on each plate.

4 plates are needed.

## Sharing by Grouping

Another type of division is by sharing equally. This involves knowing the number of groups you have, but not the number in each group.

For example, 3 children share 9 sweets equally, how many sweets does each child get?
Each child takes it in turns to take one, then again until there are none left.

There are 9 sweets altogether.

There are 3 children.

Each child gets 3 sweets.
