Parts of a Plant

Life Cycle

Key Vocabulary

| embryo | The tiny root and shoot |
|-------------|--------------------------|
| | which will grow into the |
| | adult plant. |
| seed coat | A tough outer covering. |
| | |
| food store | A store of food for the |
| | young plant to use until |
| | it has grown enough to |
| | make its own food. |
| germination | The process in which the |
| | seed soaks up water and |
| | swells, and the tiny |
| | plant bursts out of its |
| | shell, when the |
| | conditions are right. |

What Plants Needs to Survive

Difference between a seed and a bulb

Every single seed has the beginnings of a new plant inside it, along with a little store of food to help it to grow. A bulb lets the plant rest underground over the winter when it is too cold, then grow back later in the year when the conditions are right.
